

IMPORTANT TYPICAL FOOTING INFORMATION

To whom it may concern:

Attached are typical footing details for the shelter model you are interested in... we can only provide an TYPICAL footing size without a purchase order for the shelter or, at a minimum, the engineering option on your quote. The ACTUAL required footing size and steel reinforcing for this project can only be determined within the engineering process for the project model in conjunction with the actual project location's specific design criteria and local codes. Attached is our closest size suggestion based on a "national average" and should be used for budget and quoting purposes only and SHOULD NOT be used for actual digging and pouring of footings for the project.
