Steel Roof Panel Colors

Steel roof panels come in a variety of colors and options to fit different aesthetic and functional needs.

All roof panels are Galvalume coated 24 ga. steel with a white bottom and a 20 year warranted Kynar 500 top finish available in a variety of colors. Panels are fastened to frame with either exposed painted screws or concealed clips as with standing seam panels. Some panels may have color limitations. Fiberglass shingles are available upon request.

Custom RAL Powder colors available
Frame only

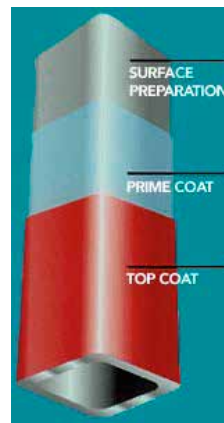

Choose from over 100 color options to fit your exact requirements!

Powder coating with zinc rich primer and TGIC polyester

Shot blasted steel with factory applied zinc rich primer and TGIC Polyester (2.5 – 3.5 mil thickness on exterior).

Powder Coat Application Process

Surface Preparation

SPG commercial blast to a profile of 1.0 mil.

Prime Coat

Zinc-rich epoxy primer is applied to a 2.5 – 3.5 mil thickness and then baked at 350°F for 20 minutes to gel the primer. This doesn't completely cure the primer; so when the top coat is applied, it allows the primer and top coat to cross-link for better adhesion.

Top Coat

TGIC Polyester applied to a 2.5 – 3.5 mil thickness and baked at 400°F
